EDUCATION

University of California, Irvine

September 2020 - June 2024

Bachelor of Science in Computer Science

Irvine, CA

- **GPA:** 3.63/4.0 (8x Dean's List)
- **Leadership & Involvement:** ICS Student Council Projects Committee, FUSION Mentor
- **Courses:** Computer Vision, Artificial Intelligence, System Design, Data Structures & Algorithms

EXPERIENCE

Machine Learning Engineer

May 2024 - Present

Boundary Remote Sensing Systems

Remote

- Greenfielding an ML pipeline to generate reports with data visualizations tailored to geospatial data, utilizing **CUDA** and **HuggingFace Transformers** for inference.
- Improved Microsoft LIDA's optimization capabilities by making an open-source contribution enabling 4-bit quantization for LLMs running locally.

Software Developer

November 2023 - Present

ICS Student Council - ZotMeal

Irvine, CA

- Led front-end development by designing **Figma** mockups, creating mobile and web-responsive UI components with **React Native**, and integrating with the back-end using **trPC**.
- Sped up back-end cron services by 50% by parallelizing async operations for **AWS Lambda** serverless functions.
- Slashed setup and teardown times for PostgreSQL integration tests by 30% by adopting **Testcontainers** to simplify database test suites in **Vitest**.

Software Engineer Intern

July 2023 - July 2024

Thaddeus Resource Center

Remote

- Led the full lifecycle of a Next.js web app, achieving a 78% reduction in infra costs.
- Managed a team of 6 web developers and accelerated development by building a CI/CD pipeline that automates tests, builds, and deployments for staging and production using **GitHub Actions**.
- Boosted organizational efficiency by developing comprehensive internal systems, including an admin dashboard for staff management and a blog system, streamlining operations.
- Accelerated CI execution times by 50% by parallelizing **Jest** and **Playwright** E2E test suites.

PROJECTS

Gesture-Controlled Robot Arm | C++, Arduino | [GitHub](#)

- Led development of embedded systems software within a cross-functional team of 11 engineers for a gesture-controlled robot arm using **Arduino** microcontrollers.
- Achieved 1st place and won 2 additional awards at FUSIONCon: **Sponsor's Choice** and **Most Innovative Design**.

Audio Distortion VST Plugin | C++ | [GitHub](#)

- Developed a standalone audio plugin by utilizing JUCE and performing in-DAW testing with FL Studio.
- Implemented 3 audio distortion algorithms and a GUI with an output meter and input knobs.

NASA Radiation Microscopy Generative AI Model | Python, PyTorch Lightning | [GitHub](#)

- Furthered research on the effects of cosmic radiation on astronauts by developing a Generative Adversarial Network to augment NASA's BPS microscopy dataset, generating synthetic images that mimic irradiated cells.
- Classified images with 93% accuracy on a large subset of the domain by leveraging ResNet101.

Geospatial Web Game | TypeScript, Python, Next.js, Tailwind CSS | [GitHub](#)

- Developed a browser game in 24 hours that utilizes a reverse geocoder API to generate geospatial clues for players to guess Orange County cities.
- Won 2 awards at Data@UCI's Atlantis Datathon: **People's Choice** and **Best Use of Melissa Data API**.
- Managed development and deployment of the app with **Next.js** and **Vercel**.

TECHNICAL SKILLS

Programming Languages: C, C++, C#, Python, JavaScript, Golang, Rust, Java, SQL, HTML, CSS

Tech: React.js, Node.js, ASP.NET, MySQL, Postman, Docker, AWS, Azure, Vercel, NoSQL, CUDA, NumPy, pandas

Other: Linux (Ubuntu), Visual Studio, Bash Shell Scripting, Powershell, GitLab, Agile, Scrum, Jira (Kanban), SDLC
