EDUCATION

University of California, Irvine

September 2020 - June 2024

Bachelor of Science in Computer Science

Irvine, CA

- **GPA**: 3.63/4.0 (8x Dean's List)
- Leadership & Involvement: ICS Student Council Projects Committee, FUSION Mentor
- Courses: Computer Vision, Artificial Intelligence, System Design, Data Structures & Algorithms

EXPERIENCE

Machine Learning Engineer

May 2024 - Present

Boundary Remote Sensing Systems

- Greenfielding an ML pipeline to generate reports with data visualizations tailored to geospatial data, utilizing CUDA and HuggingFace Transformers for inference.
- Improved Microsoft LIDA's optimization capabilities by making an open-source contribution enabling 4-bit quantization for LLMs running locally.

Software Developer

November 2023 - Present

ICS Student Council - ZotMeal

Irvine, CA

Remote

- Led front-end development by designing Figma mockups, creating Android, iOS, and web-compatible React Native components, and integrating with the back-end using tRPC.
- Sped up back-end cron services by 50% by parallelizing async operations for AWS Lambda serverless functions.
- Slashed setup and teardown times for PostgreSQL integration tests by 30% by adopting **Testcontainers** to simplify database test suites in **Vitest**.

Software Engineer Intern

July 2023 - July 2024

Thaddeus Resource Center

Remote

- Led the full lifecycle of a Next. is web app, achieving a 78% reduction in infra costs.
- Managed a team of 6 web developers and accelerated development by building a CI/CD pipeline that automates tests, builds, and deployments for staging and production using **GitHub Actions**.
- Boosted organizational efficiency by developing comprehensive internal systems, including an admin dashboard for staff management and a blog system, streamlining operations.
- Accelerated CI execution times by 50% by parallelizing Jest and Playwright E2E test suites.

Projects

NASA Radiation Microscopy Generative AI Model | Python | GitHub

- Furthered research on the effects of cosmic radiation on astronauts by developing a Generative Adversarial Network with **PyTorch Lightning** to generate synthetic images that mimic irradiated cells.
- Classified images with 93% accuracy on a large subset of the domain by leveraging ResNet101.
- Presented project results to NASA GeneLab scientists after developing the project in Agile sprints.

Gesture-Controlled Robot Arm | Arduino | GitHub

- Led development of embedded systems software within a cross-functional team of 11 engineers for a gesture-controlled robot arm using **Arduino** microcontrollers.
- · Achieved 1st place and won 2 additional awards at FUSIONCon: Sponsor's Choice and Most Innovative Design.

Geospatial Web Game | TypeScript, Python, Next. js, Tailwind CSS | GitHub

- Won 2 awards at Data@UCI's Atlantis Datathon: People's Choice and Best Use of Melissa API.
- Developed an end-to-end browser game in 24 hours that utilizes a reverse geocoder API to generate geospatial clues for players to guess Orange County cities.
- Managed development and deployment of the app with Next. is and Vercel.

TECHNICAL SKILLS

Programming Languages: C, C++, C#, Python, JavaScript, Golang, Rust, Java, SQL, HTML, CSS Tech: React.js, Node.js, ASP.NET, MySQL, Postman, Docker, AWS, Azure, Vercel, NoSQL, CUDA, NumPy, pandas Other: Linux (Ubuntu), Visual Studio, Bash Shell Scripting, Powershell, GitLab, Agile, Scrum, Jira (Kanban), SDLC
